

COMICCRAFTAI

NON-FUNCTIONAL REQUIREMENTS

1. INTRODUCTION

Non-functional requirements describe the quality, performance, security, usability, and reliability requirements of ComicCraftAI.

2. USABILITY

The application should provide a simple and easy-to-understand user interface.

Users should be able to enter their story information without requiring programming knowledge.

3. PERFORMANCE

The application should process requests efficiently while depending on external generative AI services for story and image generation.

4. RELIABILITY

The application should handle temporary AI service failures gracefully and should provide appropriate error messages.

5. SECURITY

API keys and access tokens should not be exposed in source code or frontend pages.

Sensitive configuration values should be stored using environment variables.

6. MAINTAINABILITY

The application should use a modular architecture so that individual components can be modified independently.

7. SCALABILITY

The architecture should allow additional AI models, features, and comic formats to be added in the future.

8. AVAILABILITY

The application should be deployable as a web service and accessible through a browser when the service is running.

9. COMPATIBILITY

The web interface should work with modern web browsers.

10. CONCLUSION

The non-functional requirements ensure that ComicCraftAI is usable, maintainable, secure, and suitable for future development.
