

# **COMICCRAFT AI**

## **SOFTWARE AND HARDWARE REQUIREMENTS**

### **1. SOFTWARE REQUIREMENTS**

Operating System:

Windows, Linux, or macOS can be used for development.

Programming Language:

Python is used for backend development.

Backend Framework:

FastAPI is used to develop the web backend and API routes.

Frontend Technologies:

HTML, CSS, and Jinja2 templates are used to create the web interface.

Generative AI:

Google Gemini API is used for comic outline, narration, and dialogue generation.

Image Generation:

Hugging Face Inference API is used for generating comic panel images.

PDF Generation:

FPDF is used to generate the final comic PDF.

Development Environment:

Visual Studio Code can be used for project development.

Version Control:

Git and GitHub are used for source code management.

Deployment:

Render can be used to deploy the web application.

### **2. HARDWARE REQUIREMENTS**

Development can be performed using a standard laptop or desktop computer.

Recommended hardware:

- Processor: Modern multi-core processor
- RAM: 4 GB or more recommended
- Storage: Sufficient storage for source code and generated images
- Internet: Stable internet connection
- Display: Standard monitor or laptop display

### **3. INTERNET REQUIREMENT**

An internet connection is required because ComicCraftAI communicates with external generative AI services.

### **4. CONCLUSION**

The software and hardware requirements of ComicCraftAI are suitable for development on a standard modern computer with internet connectivity.
