

COMICCRAFTAI

PROJECT DEVELOPMENT PLAN

1. PROJECT INITIALIZATION

Set up the Python development environment and create the project structure.

2. BACKEND DEVELOPMENT

Develop the FastAPI application and create routes for user interaction and comic generation.

3. GENERATIVE AI INTEGRATION

Integrate Gemini to generate the five-panel comic outline, narration, dialogue, and image prompts.

4. IMAGE GENERATION

Integrate the Hugging Face inference service to generate illustrations for the comic panels.

5. LAYOUT PROCESSING

Develop the layout builder to combine story information and generated images.

6. PDF EXPORT

Implement PDF generation so that users can download the generated comic.

7. FRONTEND DEVELOPMENT

Develop HTML templates and CSS for the story input form and comic preview.

8. TESTING

Test individual modules and the complete comic generation workflow.

9. DEPLOYMENT

Configure the application for deployment using GitHub and Render.

10. MAINTENANCE

Monitor the application and update dependencies, AI models, and features when required.

11. FUTURE DEVELOPMENT

Possible future improvements include:

- More than five comic panels
- Character consistency
- Multiple characters
- Voice narration
- Different comic layouts
- User accounts
- Comic editing
- Multiple image styles
- Mobile-friendly improvements

12. CONCLUSION

The development plan provides a structured approach for implementing and improving ComicCraftAI from initial development through deployment and future enhancement.
