

COMICCRAFTAI

BRAINSTORMING & IDEA PRIORITIZATION

Project Title:
ComicCraftAI – AI-Powered Comic Story Creator

1. INTRODUCTION

ComicCraftAI is an AI-powered web application designed to help users transform their creative story ideas into illustrated comics. The system combines generative artificial intelligence, natural language processing, image generation, and automated document generation to simplify the comic creation process.

The main purpose of ComicCraftAI is to allow users to provide a story concept, character name, setting, tone, and preferred art style. The system then generates a structured five-panel comic containing scenes, narration, dialogue, and AI-generated illustrations.

2. PROBLEM IDENTIFICATION

Creating a comic manually requires several skills, including story writing, character development, illustration, panel design, dialogue writing, and document formatting. Many users may have creative ideas but may not have the artistic or technical skills required to convert those ideas into a complete comic.

Therefore, there is a need for a simple AI-powered system that can assist users throughout the comic creation process.

3. BRAINSTORMING OF IDEAS

During the brainstorming stage, several possible project ideas were considered.

Idea 1: AI Story Generator

The system would generate a complete story from a user-provided topic or prompt.

Idea 2: AI Character Generator

The system would create fictional characters based on user-provided descriptions.

Idea 3: AI Image Generator

The system would generate illustrations from text descriptions.

Idea 4: AI Comic Generator

The system would transform a story idea into a sequence of illustrated comic panels.

Idea 5: AI Comic PDF Generator

The system would generate a complete comic and automatically convert it into a downloadable PDF document.

4. IDEA COMBINATION

After brainstorming, the above concepts were combined into one integrated application.

ComicCraftAI combines:

- Story idea generation
- Five-panel comic outline generation
- Narration generation
- Dialogue generation
- AI image generation
- Comic panel layout
- Comic preview
- PDF export

5. FINAL PROJECT IDEA

The selected project idea is:

“ComicCraftAI – An AI-powered web application that transforms a user's story idea into a five-panel illustrated comic with narration, dialogue, AI-generated images, and downloadable PDF output.”

6. IDEA PRIORITIZATION

The final idea was selected based on the following considerations:

- Practical usefulness
- Integration of generative AI
- User friendliness
- Technical feasibility
- Educational value
- Creativity
- Potential for future expansion

7. TARGET USERS

The intended users of ComicCraftAI include:

- Students
- Writers
- Storytellers
- Comic enthusiasts
- Content creators

- Beginners interested in comic creation
- Users who want to visualize creative ideas

8. EXPECTED BENEFITS

ComicCraftAI can reduce the amount of manual effort required to create a basic comic. Users can focus on their ideas while the system assists with story structure, narration, dialogue, illustrations, layout, and PDF generation.

9. CONCLUSION

The brainstorming process resulted in the development of ComicCraftAI, an integrated AI-powered comic creation platform. The project combines multiple generative AI capabilities into a single workflow that allows users to transform simple story ideas into illustrated comics.
