

COMICCRAFTAI

DEFINE PROBLEM STATEMENT

Project Title:
ComicCraftAI – AI-Powered Comic Story Creator

1. INTRODUCTION

Comic creation traditionally involves multiple activities such as developing a story, creating characters, writing dialogue, designing scenes, producing illustrations, arranging panels, and preparing the final document.

These activities can require significant time and artistic and technical skills.

2. EXISTING PROBLEM

Many people have creative story ideas but do not have the skills required to convert those ideas into complete illustrated comics.

The traditional comic creation process may require:

- Story writing skills
- Character design skills
- Drawing or illustration skills
- Panel layout knowledge
- Dialogue writing
- Image editing
- Document formatting

As a result, beginners may find comic creation difficult and time-consuming.

3. PROBLEM STATEMENT

Users often have creative stories but lack the artistic and technical skills required to convert those ideas into complete illustrated comics.

There is a need for a user-friendly AI-powered system that can transform a simple story concept into a structured and illustrated comic while reducing manual effort.

4. PROPOSED SOLUTION

ComicCraftAI is proposed as an AI-powered web application that allows users to enter their story requirements through a simple web interface.

The user provides:

- Story prompt
- Character name

- Setting
- Tone
- Art style

The system processes these inputs using generative AI and produces a five-panel comic.

5. SYSTEM OUTPUT

The system generates:

- Five-panel comic outline
- Scene descriptions
- Narration
- Dialogue
- AI-generated panel images
- Comic preview
- Downloadable PDF

6. PROJECT OBJECTIVES

The major objectives of ComicCraftAI are:

1. To provide a simple interface for comic creation.
2. To transform user story ideas into structured comic panels.
3. To generate narration and dialogue using generative AI.
4. To generate illustrations for comic panels.
5. To combine text and images into a comic layout.
6. To provide a downloadable PDF version of the generated comic.
7. To reduce the manual effort involved in basic comic creation.

7. EXPECTED OUTCOME

The expected outcome is a web-based AI comic creation system that enables users to generate a complete five-panel illustrated comic from a simple story idea.

8. CONCLUSION

ComicCraftAI addresses the difficulty of converting creative ideas into illustrated comics by combining AI-based story generation, image generation, layout processing, and PDF generation into a single application.
